Shall come into force w.e.f. 1993 94

Regulations For The
B. Pharmacy Degree Course

The Tamil Nadu Dr. M. G. R. Medical University

MADRAS Assistant Registrar (Affiliation)
The T.N. Dr. M.G.R. Medical University
No. 52, E.V.K. Sampath Salai
Vepery, Madras - 600 007.

Regulations of the University

In exercise of the powers conferred by Section 44 of the Tamil Nadu Dr. M. G. R. Medical University, Madras, Act, 1987 (Tamil Nadu Act 37 of 1987), the Standing Academic Board of the Tamil Nadu Dr. M. G. R. Medical University hereby makes the following regulations:

SHORT TITLE AND COMMENCEMENT:

These regulations shall be called "THE REGULATIONS FOR THE B. PHARMACY DEGREE COURSE OF THE TAMIL NADU DR. M. G. R. MEDICAL UNIVERSITY, MADRAS".

They shall come into force from the academic year 1993-94 session except the regulation, relating to the eligibility criteria for undergraduate courses which comes into effect from 1992-93 session.

The regulations framed is subject to modifications from time to time by the Standing Academic Board.

REGULATIONS

1. QUALIFICATION FOR ADMISSION

- a) Candidates belonging to all categories except Scheduled Castes / Scheduled Tribes for admission to the B. Pharm. course must have obtained not less than 50% of marks in aggregate in Physics, Chemistry and Biology (Botany and Zoology) **taken together** at the qualifying examination (Academic stream) after a period of 12 years of study.
 - b) Candidates belonging to Scheduled Castes / Scheduled Tribes, the minimum marks for admission shall be 45% in lieu of 50% for General Category.
- OR
- c) Candidates qualified in the Diploma in Pharmacy examination conducted by the Board of Examinations of the Government of Tamil Nadu or any other Board of any other State recognised as equivalent thereto by the authority of this University.

Other Criteria

Where the course content is not as prescribed for 10+2 education structure of the National Committee, the candidates will have to undergo a period of one year pre-professional training before admission to the Pharmacy Colleges.

- a) The pre-professional examination with Physics, Chemistry and Biology, after passing either the higher secondary school examination, or the pre-university or an equivalent examination. The pre-professional examination shall include a practical test in these subjects.
- b) The pre-university Course which was in vogue prior to the advent of the Higher Secondary examination shall not be treated as equivalent to the Higher Secondary Examination (10+2) for purpose of eligibility and admission to the course.

- c) Wherever the State Board / Body or appropriate authority have taken into account only the Plus Two level marks to determine the class of the candidate and issue the statement of marks accordingly, it alone would be taken into consideration.
- d) Wherever the State Board / Body or appropriate authority have taken into account the marks obtained at the Plus One and Plus Two levels to determine the class of the candidate and the aggregate of the two examinations shall be taken into consideration.
- e) Candidates who have studied abroad and have passed the equivalency of qualification as determined by the Association of Indian Universities will form the guidelines to determine the eligibility and must have passed in the subjects of Physics, Chemistry, Biology (Botany / Zoology) and English upto 12th Standard level with 50% marks aggregate.
- f) Any criteria not covered under the above provisions, the ruling of the Eligibility Committee shall be adopted.

National Open School Qualification

Candidates who have passed the Secondary School examination of National Open School with minimum 5 subjects with any of the following group of subjects:

- a) English, Physics, Chemistry, Botany, Zoology.
 - b) English, Physics, Chemistry, Biology and any other language.
- (To be read along with 'Qualification for Admission' 'a' and 'b')

2. AGE LIMIT FOR ADMISSION

Should have completed the age of 17 years at the time of admission or would complete the said age on or before 31st December of the year of admission to the first year B. Pharm. course.

3 DURATION OF THE COURSE

4 Academic Years (Non-Semester)

4. COMMENCEMENT OF THE COURSE

July 1st of an Academic Year

5. ACADEMIC TERMS

First B. Pharm	... July 1st to March 31st
Second B. Pharm	... June 1st to March 31st
Third B. Pharm	... June 1st to March 31st
Fourth B. Pharm	... June 1st to March 31st

6. CUT-OFF DATES

The candidates admitted from 1st July to 30th September will be registered to take up their 1 year examination in April of the next year.

The candidates admitted from 1st October to February 28th will be registered to take up their 1 year examination during the October of the next year.

The candidates admitted on or after 1st March to 31st March will be registered to the academic year concerned but they have to undergo the course and appear for the examination along with the subsequent year batch of students.

7. COMMENCEMENT OF EXAMINATION

April 1st / October 1st

If the date of commencement of the examination falls on Saturdays, Sundays or declared Public Holidays, the examination shall begin on the next working day.

8. CURRICULUM

The curriculum and syllabi for the course shall be as prescribed by the University from time to time.

9. WORKING DAYS IN AN ACADEMIC YEAR

Each academic year shall consist of not less than 200 working days.

10. IMPROVEMENT OF MARKS IN THE HIGHER SECONDARY EXAMINATIONS

Candidates who have secured the stipulated minimum academic requirements in two opportunities for improvement within one year from the date of first appearance in the qualifying examination are eligible for I B. Pharm. Degree course.

11. RE-APPEARANCE OF FAILED CANDIDATES

Candidates who have passed the failed subjects in the qualifying examination in two opportunities within a period of one year or the first appearance are eligible for admission to the First B. Pharm. Course.

12. ELIGIBILITY CERTIFICATE

Candidates who have passed any qualifying examination other than the Higher Secondary Course examination conducted by the Government of Tamil Nadu shall obtain an eligibility certificate from the University by remitting the prescribed fees along with the application form before seeking admission to any one of the affiliated institutions.

13. REGISTRATION

A candidate admitted to the course in any of the affiliated colleges shall register with this University by remitting the prescribed fees along with the application form for registration duly

filled in and forwarded to this University through the Head of the Institution within the stipulated date.

14. ATTENDANCE REQUIRED FOR ADMISSION TO EXAMINATION

- a) No candidate shall be permitted to appear for any one of the parts of B. Pharm. examinations unless he has attended the course in the subject for the prescribed period in an affiliated institutio recognised by this University and produces the necessary certificate of study, attendance, satisfactory conduct and progress from the Head of the Institution.
- b) A candidate is required to put in minimum 80% of attendance in both theory and practical separately in each subject before admission to the examination
- c) A candidate lacking in the prescribed attendance and progress in any one subject in theory and practical shall not be permitted for admission to the entire examinations in the first appearance.

15. REGULATIONS FOR CONDONATION OF LACK OF ATTENDANCE

Condonation of shortage of attendance upto a maximum of 10% in the prescribed eligible attendance for admission to an examination rests with the discretionary powers of the Vice-Chancellor. A candidate lacking in attendance should submit an application in the prescribed form and remit the stipulated Fee, 15 days prior to the commencement of the theory examination. The Head of the Department and Head of the Institution should satisfy themselves on the reasonableness of the candidate's request while forwarding the application with their endorsements to the Controller of Examinations, who would obtain the approval of the Vice-Chancellor for admission of the said candidate to the examination. No application would be considered if it is not forwarded through proper channel.

Application for condonation of lack of attendance shall be taken up for consideration on the following grounds:

- a) Any illness afflicting the candidate. (The candidate should submit to the Head of the Institution a Medical Certificate from a registered Medical Practitioner soon after he returns to the Institution after treatment.)
- b) Any unforeseen tragedy in the family. (The parent / guardian should give in writing the reason for the ward's absence to the Head of the Institution.)
- c) Participation in NCC/NSS and other co-curricular activities representing the Institution or University. (The Head of the Institution should instruct the concerned officers in-charge of the student activities in their institution to endorse the leave.)
- d) Any other leave the Head of the Institution deems reasonable for condonation.

16. RE-ADMISSION AFTER BREAK OF STUDY

- a) Candidates having a break of study of 5 years and above from the date of admission and more than two spells of break will not be considered for re-admission.
- b) The five years period of break of study shall be calculated from the date of first admission of the candidate to the course for the subsequent spells of break of studies.
- c) Candidates having break of study shall be considered for re-admission provided that they are not subjected to any disciplinary action and no charges are pending or contemplated against them.
- d) All re-admission of candidates are subject to the approval of the Vice-Chancellor.

e) The candidates having a break of study below 6 months shall for re-admission to the Academic Officer of this University. The candidates may be re-admitted in the corresponding course of study at the commencement of the session and shall undergo a minimum period of study of 3 months and after fulfilment of the regulations of this University be admitted for the examination. The candidates shall be granted exemption in the subjects they have already passed.

f) The candidates having a break of study of 6 months and above but less than one year shall apply for re-admission to the Academic Officer of this University. The candidates may be re-admitted in corresponding course of study at the commencement of the session and shall undergo a minimum period of study of 3 months and after fulfilment of the regulations of this University be admitted for the examination. The candidates shall be granted exemption in the subjects they have already passed.

g) The candidates having a break of study of one year and above but less than three years shall apply for condonation to the Academic Officer of this University.

The candidate may be re-admitted in the corresponding course of study at the commencement of the session and shall undergo a minimum period of study of 6 months and after fulfilment of the regulations of this University be admitted for the examination. The candidates shall be granted exemption only in the subjects they have already passed.

h) The candidates having a break of study of 3 years but less than 5 years shall apply for re admission to the Academic Officer of this University.

The candidates may be permitted to re-join the course at the beginning of the course with the condition that these candidates will have to undergo the prescribed period of study permitted by the University on re admission and will not be granted any exemption in any subject they have already passed. They shall subscribe to the regulations of this University.

17. MIGRATION/TRANSFER OF CANDIDATES

Migration / Transfer of candidates from one recognised institution to another recognised institution of this University shall be granted on the following conditions:

a) All migrations/transfers are subject to the approval of the Vice-Chancellor.

b) Transfer shall be effected only at the beginning of the academic year

c) The transfer application should be sent through proper channel to the Academic Officer within **three months** of publication of the results or admission to the course.

d) Transfers shall be effected during any year of study after fulfilment of the regulations of this University.

e) Transfers will be effected subject to the condition that the sanctioned strength of that institution in that particular year is not exceeded.

f) The provision of combination of attendance shall be granted to the transferee for admission to the examination of this University on satisfactory fulfilment of the regulations of this University.

18. SUBMISSION OF LABORATORY RECORD NOTE BOOKS

At the time of practical examination, each candidate shall submit to the Examiners his / her laboratory note books duly certified by the Head of the Department as a bonafide record of the work done by the candidate.

The practical record shall be evaluated by the concerned Head of the Department (Internal Evaluation) and the practical record marks shall be submitted to the University 15 days prior to the commencement of the theory examinations.

The candidate may be permitted at the discretion of examiners to refer to the practical record book during the practical examination. No other materials, handwritten, cyclostyled or printed guides is allowed for reference during the practical examinations.

In respect of failed candidates the marks awarded for records at previous examinations will be carried over for the subsequent examination or the candidates shall have the option to improve his performance by submission of fresh records.

19. INTERNAL ASSESSMENT

A minimum of four written examinations shall be conducted in each subject during an academic year and the average marks of three best performances shall be taken into consideration for the award of sessional marks.

A minimum of three practical examinations shall be conducted in each subject during an academic year and an average of two best performances shall be taken into consideration for award of sessional marks.

A failed candidate in any subject should be provided an opportunity to improve his sessional marks by conducting a minimum of two examinations in theory and practical separately and the average may be considered for improvement.

The internal assessment marks (both in written and practicals taken together) should be submitted to the University endorsed by the Head of the Institutions 15 days prior to the commencement of the theory examinations.

20. CLASSIFICATION OF SUCCESSFUL CANDIDATES

A. A successful candidate who secures 60% or above of the marks in the aggregate in his/her first appearance will be declared to have passed in the first class in that particular subject and a successful candidate securing 75% or above of the marks in the aggregate in any subject in the first appearance will be declared to have passed the examination in the subjects with distinction.

B. First class may be awarded to such candidates who have passed all the subjects at the first appearance and obtained 60% of marks and above in aggregate in all the subjects he/she had appeared.

C. Candidates who have passed all the subjects at the first appearance and obtained 75% of marks and above (in aggregate) in all the subjects he/she had appeared shall be awarded first class with distinction.

D. All other successful candidates shall be declared to have passed in second class.

21. EXEMPTION FROM RE-EXAMINATION IN A SUBJECT

Candidates who failed in the examination but obtained pass marks in any subject shall be exempted from re-examination in that subject.

22. CARRY-OVER OF FAILED SUBJECTS

a) A candidate is permitted to carry over 2 first year subjects to the second year, but shall pass the first year failed subjects before admission to the third year.

b) The candidate is permitted to carry over 2 second year subjects to third year, but shall pass the second year subjects before admission to the fourth year.

- c) The candidate is permitted to carry over 2 failed subjects in third year and appear along with the final year examination. (A subject means theory, practical, oral taken together)

23. PRACTICAL TRAINING

A practical training of 3 months at the end of third academic year in Dispensing Hospital Pharmacy or a Pharmaceutical Industry should be encouraged, which is optional.

24. PROJECT WORK

All the students shall submit a short report on a project study undertaken in any of the following subjects :

- a) Pharmaceutics
- b) Pharmaceutical Chemistry
- c) Pharmacognosy
- d) Pharmacology

The project shall be carried out under the guidance of a teacher in the College.

The project may be carried out either individually or in groups not exceeding 5 in number.

The project report shall be submitted in triplicate (typed copy not exceeding 25 pages).

The project will be evaluated by the examiner at the time of the practical examination appointed by the University.

The projects shall be evaluated by qualitative grading as Excellent / Good / Average.

The evaluation of the project report shall not be considered for the purpose of pass / class / rank, but the grading shall be included in the Mark Sheet of the Final B. Pharm. course.

25. SUBJECTS OF STUDY

First B. Pharm.

- i) Pharmaceutical Inorganic Chemistry
- ii) Pharmaceutical Organic Chemistry
- iii) Pharmaceutical Physical Chemistry
- iv) Anatomy, Physiology & Health Education
- v) Mathematics including Bio-statistics

Second B. Pharm

- i) Bio-Chemistry
- ii) Advanced Pharmaceutical Organic Chemistry
- iii) Pharmacy Administration & Industrial Business Management
- iv) Physical Pharmaceutics
- v) Preparative Pharmacy including History of Pharmacy

Third B. Pharm.

- i) Pharmacognosy
- ii) Chemistry of Synthetic Drugs
- iii) Pharmacology & Toxicology
- iv) Dispensing Hospital & Clinical Pharmacy
- v) Forensic Pharmacy

Fourth B. Pharm

- i) Chemistry of Natural Products
- ii) Pharmaceutical Biotechnology

- iii) Formulative & Industrial Pharmacy
- iv) Advanced Pharmacognosy
- v) Modern Methods of Pharmaceutical Analysis
- vi) Project Work

26. MARKS QUALIFYING FOR A PASS

45% of marks in the University theory examinations

50% of marks in the University practical examinations

50% of marks in aggregate in theory, practical and oral

27. REGULATIONS FOR REVALUATION OF ANSWER PAPERS

As prescribed for other Under-graduate courses.

28. VACATION

6 weeks in an Academic Year

PROFORMA

Format for furnishing details of candidates in whose cases Condonation of shortage of attendance has been granted for appearing for THEORY EXAMINATIONS

Name of the College : _____
 Academic Year for which Condonation has been granted for : _____

Sl. No.	Name of the Candidate (s)	Name of the Course and Branch	Total No of working days / hours for the year / Semester	Minimum No. of days required for attendance (80%)	No. of days attended by the candidate	Actual shortage of attendance

SYLLABUS

I - B. PHARMACY

PHARMACEUTICAL INORGANIC CHEMISTRY
THEORY

1. Atomic structure and valency. Development of periodic classification of elements and discussion of the periodic table on the modern conception of atomic structure and its importance. Radioactivity, Radio isotopes and Pharmaceutical applications of Radiopharmaceuticals viz. Ferric citrate (^{59}Fe) Sodium iodide (^{131}I) Sodium phosphate (^{32}P) and cyanocobalamin (^{58}Co).
2. Sources of impurities in Pharmaceutical substances: Official limit tests: Limit test for chloride, sulphate, iron, heavy metals, arsenic and lead.
3. A study of theory of assays involving neutralisation, oxidation, precipitation and gravimetric methods. Study of theory and choice of indicator in assays.
4. a) A systematic study of the following Inorganic Compounds for their preparation, properties, properties, assay and uses. Official compounds of Oxygen, Sulphur, Selenium, Halogens, Nitrogen, Phosphorous, Boron, Silicon, Titanium, Calcium, Barium and lead. (Mention about Pharmacopoeias and details about typical monograph of drugs).
- b) Selected test for purity as given below :
 - i) Setting property of plaster of Paris.
 - ii) Oxidising substance in Oxygen.
 - iii) CO_2 and CO in Oxygen.
 - iv) Magnesium and alkali metals in calcium Chloride.
 - v) Acidity and Stability in Hydrogen peroxide.
 - vi) Sucrose and reducing sugars in calcium gluconate etc. .

PROFORMA

Format for furnishing details of candidates in whose cases Condonation of shortage of attendance has been granted for appearing for THEORY EXAMINATIONS

Name of the College :

5. Official compounds of Sodium Potassium, Copper, Silver, Gold, Magnesium, Zinc, Mercury, Arsenic, Antimony, Bismuth, Iron and Aluminium.

Selected tests for purity viz.

- Iodides and Bromides in Sodium Chloride.
- Sulphate and sulphite in sodium thiosulphate.
- Iron in Sodium metabisulphite.
- Iodides and chlorides in Potassium bromide.
- Cyanides in potassium iodide.
- Chloride in Potassium permanganate.
- Lead in Zinc Chloride.
- Coarse particles in Light Kaolin
- Water and alcohol soluble dyes in calamine.
- Ferric ion and reducing sugars in ferrous gluconate.
- Microbial limit in milk of Magnesia
- Acid absorption by Magnesium trisilicate.
- Neutralising capacity of Aluminium hydroxide.

6. Methods of preparation and uses of the following Chemicals / reagents used in Pharmaceutical analysis.

- Sodium edetate
- Sodium thiosulphate
- Titanous chloride
- Ferric sulphate
- Hydrogen Peroxide
- Nessler's reagent
- Karl Fischer's reagent
- Benedict's reagent

- Mayer's reagent
- Lithium Aluminium hydride
- Boron trifluoride
- Thionyl chloride
- Periodic acid
- Per chloric acid
- Alumina
- Silicagel
- Theory of Co-ordination compounds with special reference to applications in Pharmacy and Pharmaceutical analysis viz. E D T A, Dimercaprol, Penicillamine.

PRACTICALS

- Limits tests - Chlorides, Sulphates, Arsenic, Iron and Heavy metals in various drugs and chemicals.
- Assay of Pharmaceutical inorganic compounds involving acid - base, Argentimetry, Iodimetry, Redox titration, Complexometry and Gravimetry.
- Qualitative analysis of mixture of inorganic salts containing Two acid and Two basic radicals.

PHARMACEUTICAL ORGANIC CHEMISTRY

THEORY

Atomic and Molecular Structure :

Molecular orbitals, ionic bond, covalent bond, multiple bond, polarity of bond.

Hydrogen bond. Organic compounds and their purification. Organic formulae and nomenclature.

Nomenclature of organic compounds including polynuclear aromatic compounds.

Alkanes :

General methods of preparation. Reaction of alkanes with special reference to substitution reaction, free radical chain reaction and bond dissociation energy.

Petroleum :

Official Pharmacopoeial compounds, their test for purity and assay. Light liquid paraffin, liquid paraffin, soft paraffin, white soft paraffin, hard paraffin and ichthammol.

Alkenes :

General methods of preparations of alkenes, structure of ethylene, carbonium ion theory, reactions of carbon-carbon double bond. Addition reaction, Markownikoff's rule, peroxide effect, electrophilic addition, free radical addition and ozonolysis.

Alkynes and Dienes :

General methods of preparation and reactions of alkynes, carbon-carbon triple bond, dienes and conjugated dienes.

Alicyclic Compounds :

Ring formation, Ring size and stability, Bayers strain theory and Diels alder reaction.

Benzene :

Aromatic character, concept of resonance, its applications and structure of Benzene.

Substitution in Aromatic Ring :

Nucleophilic, Electrophilic substitution, Mechanism of Nitration, Halogenation, sulphonation, alkylation and acylation and orientation.

Preparation, test for purity, assay and medicinal uses of prepared coal. dicophane, gamaxene, saccharin, chloramine and dichloramine T.

Alkyl Halides and Aryl Halides :

General method of preparation of alkyl and aryl halides, Nucleophilic substitution (SN 1, SN 2) reaction, Elimination reaction, (E1 & E2), Elimination Vs substitution. Preparation, test for purity, assay and Medicinal uses of Ethyl chloride, chloroform, Trichloroethylene, Tetrachloroethylene and Iodoform.

Alcohols :

General methods of preparation and reaction of alcohols, Hydrogen bonding, structure of methyl alcohol, Di and Trihydric alcohols, Glycol and glycerol, their synthesis and uses. Thio-alcohols, preparation and test for purity, assay and medicinal uses of the following pharmacopoeial compounds : Tar, Ethyl alcohol-rectified spirit, Industrial methylated spirit, Chlorobutyl Cetostearyl alcohol, Benzyl alcohol mephenesin, Glycerol, Dimercaprol, Propylene Glycol, Glyceryl trinitrate Wood alcohols.

Carboxylic Acids and Esters :

General methods of preparation and reactions, Acid chlorides, Amides, Anhydrides, Esters, their preparations from carboxylic acid. Synthetic uses, saponification, Di and tricarboxylic acid. Preparation, tests for purity, assay and medicinal uses of the following pharmacopoeial compounds :-

Acetic acid, Trichloroacetic acid, Lactic acid, oleic acid, undeconic acid. Ethyl oleate, sodium lauryl sulphate, tartaric acid, citric acid succinic acid, oxalic acid, benzoic acid, benzyl benzoate, Dimethyl phthalate, salicylic acid, Methyl salicylate, Aspirin, Sodium amino salicylate, Pheniodol, Lopanoic acid, Ethyl biscomacetate, Balsams.

Aldehydes and Ketones (Aliphatic and Aromatic) :

General methods of preparations and reactions, preparations, tests for purity, assay and medicinal uses of the following pharmacopoeial compounds. Formaldehyde solution, paraldehyde, Acetone, Chloral hydrate, Hexamine, Benzaldehyde and vanillin.

Aliphatic and Aromatic Amines :

General methods of preparations of amines, quaternary ammonium salts, Ring substitution in aromatic amines, Urea and Ureides.

Preparation, test for purity, assay and medicinal uses of etnolamine, Mustine hydrochloride, ethylenediamine hydrate, urethane, urea, carbromal, aniline, Amphetamine, Sulphanilamide and Acetanilide.

Diazonium Compounds :

Preparation, reaction and synthesis involving diazonium salts.

Phenols :

Preparation, test for purity, assay and medicinal uses of important phenols.

Acetoacetic ester & Malonic ester :

Preparation and synthetic uses (excluding sulphonamides). Ethers : General method of preparation and properties. Compound anesthetic ethers.

PRACTICALS

1. Synthesis of some organic compounds involving single step reactions like nitration, halogenation, acetylation and hydrolysis.
2. Assay of organic compounds involving acidimetry, alkalimetry, iodimetry etc.
3. Qualitative analysis of simple organic compounds for elements present, determination of saturation or unsaturation, aliphatic or aromatic and functional groups.

PHARMACEUTICAL PHYSICAL CHEMISTRY

THEORY

1. Physiochemical properties of gases, liquids and solids, Density, Surface tension, molecular volume, parachor viscosity, refractivity, polarisation of light, optical activity, dipole moment, absorption and emission spectra, X-ray analysis, physical properties, Molecular structure and chemical bonding. Crystal form, crystal lattices, Binding forces and properties of crystals.
2. Equilibrium Law of Mass action, effect of temperature and pressure on chemical equilibrium. Energy of activation. Heterogeneous equilibrium.
3. Dilute Solutions: Osmosis and Osmotic pressure, Vapour Pressure, Raoult's law. Molecular weight determination using measurement of Osmotic pressure, vapour pressure, elevation of boiling point and depression of freezing point, Abnormal molecular weights.
4. Solutions: Gases in liquids, Henry's law. Liquids in liquids, mutual solubility of liquids and critical solution temperature, partially miscible, completely miscible and completely immiscible liquids, constant boiling mixtures. Theory of steam distillation, solubility, solubility curve and supersaturation. Distribution law, partition co-efficient, and process of extraction.
5. Electrochemistry: Electrolytic condition - Faraday's laws of electrolysis, conductivity of electrolyte and its determination. Ionic mobility, Kohlrausch law and transport number. Voltaic cells, reversibility, polarisation of electrodes. Single electrode potential, Standard oxidation - reduction potential. Reference electrode and indicator electrodes.
6. Ionic Equilibria: Ostwald's dilution law. Degree of ionisation, Hydrogen ion concentration and its determination, Hydrolysis of salts, Degree of hydrolysis. Ionic product of

water, Buffer solution, Indicator, Solubility product, Common ion effect.

7. Thermo Chemistry: Heat of reaction, heat of solution, heat of formation and heat of neutralisation and Hess law.
8. Phase rule and its application to system of one component, triple point and sublimation, hydration and dehydration, efflorescence, exication, deliquescence and hygroscopicity, eutectic mixture.

Catalysts: Theory of catalysis and its application in Pharmacy.

9. Adsorption: Theory of adsorption and its application.

10. Principle's of gas Analysis.

PRACTICALS

1. Determination of Physicochemical constants like Refractive Index, surface tension, viscosity, optical rotation etc.
2. Determination of rate of reaction in zero, first order reactions.
3. Experiments based on Raoult's law like depression of freezing point, elevation of boiling point etc., molecular weight determination.
4. Determination of partition coefficient of Organic substances.
5. Buffer solutions, determination of pH.
6. Experiments based on adsorption principles.

REFERENCES

ANATOMY, PHYSIOLOGY & HEALTH EDUCATION

THEORY

ANATOMY AND PHYSIOLOGY :

1. General : The general build of the human body. Classification into various systems. Bones of the trunk, limbs and the skull, joints of body.
2. Blood : Its composition plasma and serum, corpuscles, platelets, normal quantity of blood in the body. Clotting of blood and its value in daily life.
3. Circulation : The heart, its anatomical structure, different types of Blood circulation chamber and valves cardiac cycle, heart sounds. Blood pressure-pulse, blood-vessels, artery, vein and capillary. (circulation of blood) purpose of circulation.
4. Respiration : Respiratory apparatus Respiratory movements, external respiration, internal or tissue respiration, composition of inspired and expired air. Regulation of respiration, artificial respiration.
5. Digestion and Nutrition : Organs - Functions of different organs and accessory glands salivary, gastric and intestinal, digestion, enzymes, bile, absorption, metabolism, defaecation.
6. Food : Proximate Principles : Physiological values of carbohydrates, fats, proteins, vitamins, minerals, roughage and water, balanced diet.
7. Urinary System : Structure of kidney. Mechanisms of urine formation, composition of urine. Function of ureter and bladder. Mechanism of micturition. Daily out-put of urine. Factors controlling daily out-put.

8. The Skin : Epidermis, dermis epidermal structure, nails, hairs and glands. Perspiration. Functions of the skin.
9. Nervous System : The meninges, cerebrum, seat of intelligence, will-power memory, inhibition and sensation, cerebellum. Regulation centre of posture and equilibrium, mid-brain, pons and medulla, spinal cord, nerve fibres, reflex action. Autonomic nervous system.
10. Sense Organs : Structure and function : Eye, ear, nose, tongue and skin.
11. Endocrine : Thyroid, pancreas, pituitary, suprarenal and gonads.
12. Reproductive System.
13. Concept of health and disease, basic principles of rural health and sanitation, population problem, family planning programme principles underlying family planning methods, types of contraceptives, brief outline of bacterial, rickettsial, viral, fungal protozoal infections, worm infestation, prevention of contagious diseases.

PRACTICALS

Laboratory Experiments :

1. To study stimulus response phenomenon as exemplified by the response of the frog gastrocnemius muscle carrying intensities of faradic stimulation.
2. To study factor determining the extent of muscular contraction summation of inadequate and adequate stimuli.
3. To study additional factors which may influence muscular response. The effect of previous stimuli is observed-treppe and fatigue. Influence of load and muscle length on work.

4. The study of the functions, composition and properties of blood, counts, differentials, haemoglobin determination, sedimentation rate, coagulation time, grouping, blood pressure measurement.
5. A study of cardiac activity, normal cardiac action of frog observed. Gradient of automaticity, effect of nervous factors, cardiac activity.

6. HISTOLOGY :

- a) Histology — General — Epithelium — Connective tissues — muscle and nervous tissues.
- b) Reproductive organs, alimentary system, endocrines, lymphoid-tissue.

MATHEMATICS INCLUDING BIOSTATISTICS

MATHEMATICS :

1. Algebra : Partial fractions, statement of the following theorems (Without proof), Binomial, exponential and logarithmic and summation based on these three series.
2. Matrices (up to 4th order) set theory.
3. Trigonometry : Complex numbers, De Moivre's Theorem, expansions, $\sin(n\theta)$, $\cos(n\theta)$, $\sin n\theta$, $\cos n\theta$ No Hyperbolic functions, simple problems.
4. Calculus : Limits, differential calculus coefficient of integration, Integration of functions, integrations by parts (simple integrals) Laplace transformation.
5. Differential Equations :
 - a) Variable Separable,
 - b) Homogeneous equations.
 - c) Non-Homogeneous but linear coefficients.
 - d) Linear equations of first order.
 - e) Equations reducible to linear form.

STATISTICS :

1. Scope of statistical methods of Medicine and Pharmacy.
2. Collection of Data.

3. Classification and tabulation of collected data.
4. Visual aids, diagrams, charts and graphs.
5. Measure of central tendency.
6. Dispersion.
7. Theory of sampling.
8. Statistical inference.
9. Regression and correlation.
10. Probabilities.

II B. PHARMACY

BIOCHEMISTRY THEORY

Chemical Aspects :

Chemical nature of carbohydrates, lipids, proteins.

Carbohydrates :

Classification, saccharides including polysaccharides starch - glycogen - dextrin, inulin, cellulose etc.

Lipids :

Definitions, classification, chemical nature and properties of fatty acids, fats, sterols.

Proteins & Amino Acids :

Classification, biosynthesis and properties of protein and amino acids, insulin.

Macromolecules :

Physical and chemical properties structure of protein Haemoglobin, immunoglobulins, nucleoprotein properties of macromolecules in general.

Separation & Analysis of carbohydrates, lipids & Proteins :

Vitamins :

Chemistry, source, assay, requirement, functions, deficiency, manifestations.

Harmones :

Chemical nature, properties and biochemical functions Biochemical mode of actions of hormones.

Enzymes :

Enzyme kinetics, classification and their properties, mechanism of action, coenzymes antimetabolites enzyme induction and inhibition.

Bioenergetics & TCA Cycle :

Digestion absorption and metabolism of carbohydrates lipids proteins and nucleoprotein.

Transport across biomembranes :

Nucleic acids, D.N.A. Structure, t-RNA structure :

Mineral Metabolism :

Calcium, phosphorus, magnesium, iron, sodium, potassium other trace elements.

Nutrition :

Principles of nutrition and nutritional significance of carbohydrates, lipids and proteins and major food stuffs. Principles of biochemical genetics Biochemistry of urine CSF and faeces. Constituents of Blood. Functional tests of liver and kidney. Experiments on metabolism and balance studies. Elementary basis of biochemical mode of action of drugs, liposome benzoxidation.

PRACTICALS

1. Identification of carbohydrates, proteins and fats.
2. Identification of normal and abnormal constituents of urine.
3. Estimation of chlorides, glucose, titrable acidity and ammonia and creatinine in urine.
4. Acid hydrolysis and action of salivary amylase on starch.
5. Experiment on food products (Wheat flour, milk and Potato)

6. Isolation of casein from milk.

7. Isolation of RNA from yeast.

8. Estimation of Blood glucose. Blood cholesterol, SGPT activity, SGOT activity.

9. Action of urease (Horse gram powder) on urea. (Demonstration only)

10. Separation of amino acids by P. C.

11. Identification of sugars in fruit juices by TLC.

REFERENCES

8. Practical Bio-Chemistry for Medical students. by Rajagopal & Ramakrishna.
9. Hand book of practical Bio-Chemistry by V.K. Malhotra.

ADVANCED PHARMACEUTICAL ORGANIC CHEMISTRY

THEORY

1. Polynuclear Hydrocarbons :

Preparation and chemical reactions of Diphenylmethane, Diphenylethane, Triphenylmethane, Naphthalene, Anthracene, Phenanthrene, Structure of Naphthalene and Phenanthrene, skeleton structures of medicinally importance compounds belonging to the above series.

2. a) Optical Isomerism :

Stereoisomerism, Definition, Tetrahedral carbon atom, Conventions used in stereochemistry, elements of symmetry. Racemic modifications and properties, Resolution of racemic modifications. Conformational analysis.

b) Geometrical Isomerism :

Nature, rotation about a double bond. Modern theory of double bonds. Nomenclature of isomers. Determination of configuration, stereochemistry of cyclic compounds.

3. Stereochemistry of Biphenyl compounds & Nitrogen compounds :

Walden Inversion : Nature, factors affecting Mechanism, Asymmetric synthesis. Configuration of Biphenyl molecule, optical activity, hybridisation of orbitals. Stereochemistry of Nitrogen compounds, Amines and Oximes.

4. Synthetic Tools :

Catalytic hydrogenation, Dehydrogenation, Metalhydride reduction, Reduction with hydrazine and its derivatives, Birch reduction, Clemmensen reduction, Meerwein-Ponndorf reduction, Oxidation with perchloric acid, lead tetra acetate, Mercuric acetate and Selenium Oxide, Beckmann rearrangement, Schmidt rearrangement and Darzens reaction.

5. Heterocyclic Chemistry :

Classification of Heterocyclic compounds, nature and nomenclature. Preparation and important reactions of pyrrole, furan, thiophene, pyrazole, imidazole, oxazole, isoxazole, thiazole, pyridine, pyrimidine, indole, quinoline, Isoquinoline, acridine, phenothiazine. A study of the skeleton structure and medicinal uses of the following heterocyclic derivatives used in pharmacy-Phenazone, Nikethamide, Isoniazid, Mepyramine, Behzhexol, Iodoxyl, Dicodeone, Nicotinic acid, Propylidone, chinioform, **chloroquine**, primaquine, Histamine, Carbimazole, Tolazoline, Naphazoline, Antazoline, Phenytoin, Methoin, Pyrimethamine, Primidone, Piperazine, Methyl thiouracil, Diethyl carbamazine, Mepacrine, Phennergan, Sulphathiazole.

PRACTICALS

1. Synthesis of Organic compounds involving two step reactions including Heterocyclic compounds.
2. Assay of Pharmaceutical Organic compounds based on functional groups.
3. Qualitative analysis of mixture of organic compounds containing 2 compounds-methods of separation and analysis.
4. Practicals based on stereo chemical aspects like Walden inversion (eg. sucrose).

REFERENCES

2. Organic Chemistry by Morrison and Boyd.
3. Advanced Organic Chemistry by Jerry March.
4. Stereo Chemistry of Carbon Compounds by E. L. Eliel.
5. Stereo Chemistry by Potapov.

PHARMACY ADMINISTRATION & INDUSTRIAL BUSINESS MANAGEMENT

THEORY

ECONOMICS :

1. Principles of economics with special reference to the Laws of demand and supply. Demand schedules and demand curves. Consumption and organisation of production.
2. Labour distribution, Labour problems, General conditions affecting demand for and supply of labour, Labour legislations, Labour Welfare, Trade, Unions.
3. Inland and Foreign trade. Procedure for exporting and importing of goods. Principles governing International trade. Theory of comparative cost. Foreign exchange.
4. Principles of Insurance. General, Fire and Marine Insurance.
5. Sales organisation in business house, factors governing sale, sales department, sales agencies and their control. Statistics, graphs and charts, their aid to sales control, co-operative sales, scientific advertising.

MANAGEMENT :

6. Organisation and working of commercial offices. Commercial correspondence, filing and indexing systems.
7. Factory organisation and Management.
8. Methods of marketing, departmental stores and multiple shops. Marketing and merchandising. Problems of Pharmaceutical manufactures, wholesalers and retail Pharmacists. Market research.
9. General study of patent and trademarks Act, Law of contracts, Factory and Shops Establishments Act.

ACCOUNTANCY :

10. Principles of accounting. Ledger posting and Preparation of Trial Balance, Capital and Revenue. Columnar cash book. Treatment of Bank Account. Preparation of Profit and Loss Account and Balance Sheet, elements of Income Tax, Treatmentary Bills.

REFERENCES

1. Management by James A. F. Stoner.

PHYSICAL PHARMACEUTICS

THEORY

1. Solutions :

Solubility and factors affecting solubility, steady state diffusion, dissolution, drug release, diffusion principles in biology systems, isotonic solutions and calculation involved.

2. Colloids :

Introduction, types of colloidal systems, optical properties of colloids, kinetic properties of colloids, electric properties of colloids, solubilisation.

3. Coarse Dispersions :

Suspensions, interfacial properties of suspended particles, settling in suspensions, formulation of suspensions, emulsion, theories of emulsification, physical stability of emulsions, preservation of emulsions, rheologic properties of emulsions, phase equilibria and emulsion formulation, special emulsion system, semi solids and gels.

4. Surface & Interfacial Phenomena :

Liquid interfaces, adsorption at liquid interfaces, adsorption at solid interfaces, Electrical properties of interfaces, surface tension and its determination, classification of surfactants.

5. Kinetics :

Rates and orders of reaction, influence of temperature and other factors on rates, decomposition and stabilisation of medicinal agents, kinetics in the solid state, accelerated stability analysis, kinetics of drug transport in vivo.

6. Thermodynamics: Concepts of laws, Macroscopic thermodynamic properties, Application. to closed and open. systems. Microscopic approach to intropy. Equation of heat capacity status, Thermodynamics of non-reacting mixtures. Heat capacity.

Catalysts: Theory of Catalysts and its application. in Pharmacy.

7. Micromeritics :

Particle size and size distribution, methods of determining particle size, particle shape and surface area, methods of determining surface area, pore size, derived properties of powders

8. Rheology :

Viscosity, newtonian and non newtonian fluids, thixotropy and its application, Rheology of disperse system, viscometers.

9. Complexation & Protein Binding :

Metal complexes, organic molecular complexes, inclusion compounds, methods of analysis, protein binding, complexation and drug action, crystalline structure of complexes, thermodynamic treatment of stability constants.

10. Photochemistry :

Introduction, sources of photochemical radiation, light absorption basic laws of photochemistry, photo chemical reactions and photosensitisation.

PRACTICALS

1. Determination of Interfacial properties such as surface tension, CMC, power of surfactant.
2. Experiments covering viscosity and effect of viscosity on sedimentation rate.
3. Determination of rates of reaction.
4. Particle size distribution analysis and determination of particle size.
5. Study on suspension by controlling flocculation and stability evaluation.

6. Study on flow properties of powders (Angle of Repose etc.)
7. Study on colloids: Some colloidal preparation & its stability C addition of Electrolytes.
8. Study on emulsions: Stability analysis & particle size analysis.
9. Experiments pertained to other theory chapters.
10. Comparison study on adsorbants in various pharmaceutical preparations (Ex.) Aromatic waters.

REFERENCES

2. Experimental Pharmaceutics by Eugene, Parott.
3. Tutorial Pharmacy by Cooper & Gunn.

PREPARATIVE PHARMACY INCLUDING HISTORY OF PHARMACY

THEORY

1. Pharmacy Profession: Pharmacy as a career, Pharmaceutical Education, Registration as a Pharmacist, Evolution of Pharmacy Profession-earlier period, middle ages, modern, European and American Pharmacy Pharmacopoeia of India and other countries (B.P., U.S.P., International).

2. Metrology: Metric weights and Measures. Basic and derived S.I. weights and measures. Weighting - selection and care of weights and balances. Sensitivity reciprocal and minimum weightable quantities. Density - absolute, apparent and relative, specific gravity - hydrometers, Westphal balance. Specific volume.

3. Liquids: Solutions, syrups, dry syrups, elixirs, spirits, aromatic waters, liquids for external use - lotions, liniments, ear drops throat paints, gargles, eye drops, glycerines, collodions.

Definitions, general formulation, manufacturing procedures. Uses of official and other products in common use.

4. Semisolids: Ointments, creams, pastes, jellies, Definitions, bases, general formulations, manufacturing procedures and uses of official and other products in common use.

5. Suppositories: Ideal requirements, different bases, manufacturing procedures and uses of official and other important products.

6. Powders: Advantages and limitations as dosage form, manufacturing procedure and equipments, special care and problems in manufacturing powders, powders of I.P. and their uses, effervescent granules and salts and their specific uses.

7. Crude Extracts: Principles and methods of preparation of soft and liquid extracts of I.P. from fresh and dry drugs and their uses.

8. Allergenic extracts: Types of allergens, preparation extracts, testing and standardisation of extracts, general preparations.

9. Medical Gases: Official medical gases and their uses, containers and fittings, handling and storage.

10. Radio Pharmaceuticals: Therapeutic and diagnostic uses, facilities and work area, preparation of radio pharmaceuticals.

PRACTICALS

Solutions:

1. Iodine solutions
2. Lysol
3. Strong Ammonium acetate solution IP'66.

Syrups:

1. Syrup IP
2. Toly syrup IP'66
3. Parrish's syrup
4. Syrup of Ferrous iodide
5. Any one commercially available cough syrup

Elixirs:

1. Terpin hydrate elixir IP
2. Piperazine citrate elixir BPL

Spirits :

1. Peppermint spirit BPL
2. Chloroform spirit IP'66
3. Aromatic spirit of Ammonia

Aromatic Waters :

1. Camphor water IP'66
2. Chloroform water IP'66
3. Dill water BPC
4. Concentrated Dill water BPC
5. Concentrated Peppermint water BPC

Lotions :

1. Calmine lotion IP
2. Benzyl benzoate lotion USP

Liniments :

1. Turpentine liniment IP' 66
2. Camphor liniment IP' 66
3. White liniment BPC

Ear Drops :

1. Hydrogen peroxide ear drops BPC
2. Chloramphenicol ear drops BPC
3. Boric acid ear drops BPC

Throat Paints :

1. Mandl's paint
2. Tannic acid glycerine IP' 66

Gargles :

1. Phenol gargle BPC
2. Phenol and potassium chlorate gargle BPC

Eye Drops :

1. Chloramphenicol Eye drops BP
2. Zinc sulphate eye drops BP
3. Ephedrine HCl eye drops BPC

Glycerins :

1. Borax Glycerin IP' 66
2. Boric acid glycerin IP' 66
3. Starch Glycerin IP' 55

Collodions :

1. Pyroxylin IP' 66
2. Collodion USP
3. Flexible collodion IP ; 66
4. Salicylic acid collodion IP' 66

Ointments :

1. Simple ointment IP
2. Sulphur ointment IP
3. Certimide emulsifying ointment BPC

Creams :

1. Vanishing Cream
2. Cold Cream

Pastes :

1. Zinc and salicylic acid paste BP
2. Zinc Gelatin IP' 66

Jellies :

1. Sulphanilamide Jelly BPC

Suppositories :

1. Indomethacin suppositories BP
2. Aminophylline Suppositories
3. Iodoform suppositories.

Powders :

1. Phenobarbitone powder
2. Digitalis powder
3. Compound powder of Tragacanth BPC
4. Compound Effervescent powder BPC
5. Compound sodium chloride and Dextrose oral powder BP
6. Methyl cellulose granules BPC
7. Effervescent granules BPC

Crude Extracts :

1. Compound tincture of Benzoin IP' 66
2. Tincture of orange IP' 66
3. Digitalis tincture BPC
4. Liquid extract of Liquorice BPC

III - B. PHARMACY

PHARMACOGNOSY

THEORY

1. Introduction, historical background, present status and future scope of Pharmacognosy.
- 2 a) General principles of cultivation, collection of vegetable drugs having commercial significance from wild and cultivated sources their merits and demerits.
- b) Drug improvements.
- c) Drugs deterioration, causative factors and prevention.
- d) Storage of crude drugs including manners and conditions of storage.

3. Methods of drug evaluation and standardisation (wherever applicable) including quantitative microscopy for identification and detection of adulteration.

4. 1) Detailed study of the drugs of biological origin or products from as given in IP & IPC, with suitable examples of products used in Homeopathic, Ayurvedic and unani systems of medicine. Main emphasis shall be on sources, cultivation and collection, preparation for the market, diagnostic characters (both macroscopical and microscopical - whichever applicable), constituents, chemical tests, substitutes and adulterants.

The study shall be done also in the powdered condition of these drugs, and detection of their possible adulterants,

ORGANISED DRUGS :

Barks :	a) Cinnamon	b) Cinchona	
Wood :	a) Quassia		
Leaf :	a) Senna	b) Digitalis	
Flowers :	a) Saffron	b) clove	c) Pyrethrum
Seeds :	a) Nuxvomica	b) Strophanthus	c) Linseed
Fruits :	a) Fennel	b) Coriander	c) Capsicum
	d) Pepper	e) Cardamom	
Whole Plant :	a) Ephedra	b) Belladonna	c) Henbane
	d) Stramonium	e) Datura	f) Mentha
	g) Vinca	h) Cannabis	i) Ergot
Roots & Rhizomes :	a) Liquorice	b) Ginger	
	c) Ipecacuanha	d) Rauwolfia	

UNORGANISED DRUGS :

a) Opium	b) Aloes	c) Gelatin
d) Acacia	e) Indian Tragacanth	f) Starch
g) Asafoetida	h) Colophony	i) Benzoin
j) Balsam of tolu	k) Balsam of peru	l) Storax
m) Honey	n) Beeswax	o) Oil of clove
p) Oil of Lemon	q) Castor oil	r) Olive oil

PRACTICALS

II. Study of the following drugs with main emphasis on their sources, macroscopical characters, constituents, substitutes and adulterants.

- | | | |
|-------------------------|--------------------|-------------|
| a) Cassia Bark | b) Cascara Sagrada | c) Rhubarb |
| d) Black & Pale Catechu | | e) Buchu |
| f) Cocoa | g) Tea | h) Squill |
| i) Dioscorea | j) Nutmeg | k) Isphagul |
| l) Anise | m) Ajowan | n) Caraway |
| o) Kurchi | p) Cantharides | |
| q) Chalmooogra Oil | r) Cochineal | s) Suet |
| t) Turpentine Oil | u) Lard | |
| v) Spermaceti | w) Woolfat | |

III. Study of sources, characters (Macroscopy & Microscopy) constituents and uses of:

- Materials of mineral origin : Kieselgur Kaolin, Bentonite, Talc and prepared chalk
- Powders of Natural occurrence : Lycopodium and Kamala
- Commercial Fibers used in Pharmacy : Raw Cotton, Jute, Silk, Wool, Regenerated Cellulose, Nylon.

The list of drugs prescribed for study will be altered from time to time in accordance with current pharmaceutical practice.

1. To recognise the drugs mentioned in 4 (I) and (II) in the entire condition.

2. To identify the drugs mentioned in 4 (I) by means of sensory, macroscopical and microscopical characters including microscopical measurements.

3. Identification of individual and two component mixture of powders of crude drugs mentioned in 4 (I) by microscopical analysis.

4. To do simple physical tests to identify the crude drug and to detect substitutes and adulterants.

5. To perform experiment covering quantitative microscopy.

CHEMISTRY OF SYNTHETIC DRUGS

THEORY

Synthesis, preparation, properties, pharmacopeial standards, test for purity, assay, common name, storage and therapeutic uses of organic synthetic drugs.

1. Pyridine Derivatives: Nicotinic acid, Nicotinamide, Nikethamide, Isoniazid, Ethionamide, Nialamide, Tripelenamine citrate and hydrochloride Mepyramine maleate, chlorpheniramine maleate, Triprolidine Hydrochloride, Bisacodyl, Metyrapone Diodone injection, propylidone.
2. Piperidine Derivatives: Pempidine tartarate, Eucatropine Hydrochloride, Benzhexol hydrochloride, Trihexyphenidyl anhydrochloride, Methypyrilone.
3. Quinoline Derivatives: Diodo-hydroxy quinoline, clioquinol, chloroquine phosphate, chloroquine sulphate, Hydroxy chloroquine sulphate, Amodiaquine hydrochloride, Primaquine phosphate, vipryinium embonate.
4. Pyrrolidine and furan derivatives: Procyclidine hydrochloride, Tricyclamol chloride, poldine methysulphate, Diloxanide furoate.
5. Pyrazole and Imidazole derivatives: Betazole hydrochloride, Phenylbutazone, oxyphenbutazone, sulphinpyrazone, Histamine acid phosphate, Metronidazole, Methimazole, Tolazoline hydrochloride, Naphazoline hydrochloride and nitrate, Antazoline Hydrochloride, Phenolamine hydrochloride, methane sulfonate and mesylate, carbimazole, phenytoin sodium, Ethotoin, Methoin, Nitrofurantoin, Thiabendazole.
6. Diazine Derivatives: Hydrallazine hydrochloride, pyrimethamine, oxyphencyclamine hydrochloride, primidone, Methyl Thiouracil, propyl thiouracil, pyrazinamide, piperazine adipate,

citrate and phosphate, Diethyl-carbamazine citrate, cyclizine hydrochloride, chlorcyclizine hydrochloride, Meclozine hydrochloride.

7. Barbiturates: Barbitone sodium, Butobarbitone, Amylobarbitone, its sodium salt, pentobarbitone sodium, phenobarbitone and its sodium salt, cyclohexitone, quinalbarbitone sodium, Neobarbitone, Methohexitone, injection thiopentone sodium.
8. a) Phenothiazene Derivatives: Promazine Hydrochloride, Promethazine Hydrochloride and theoclate, Ethopropazine Hydrochloride, chlorpromazine Hydrochloride, Prochlorperazine mesylate, malete and methane sulfonate. Perphenazine, Trifluorperazine hydrochloride, Thioridazine Hydrochloride Methylene blue.
- b) Azepine Derivatives: Desipramine hydrochloride, Imipramine hydrochloride, chlordiazepoxide hydrochloride, Nitrazepam.
9. Synthetic Local Anaesthetics: Benzocaine, Procaine hydrochloride, chloroprocaine hydrochloride, Amethocaine Hydrochloride, Lignocaine hydrochloride, Procainamide hydrochloride, Cinchocaine hydrochloride, cyclomethycaine sulphate.
10. a) Sulphonamides & Sulphones: Sodium sulphadiazine and its sodium salts, sulfamerazine, sulphadimidine, sulphamethazine its salts, sulphamethoxydiazine, sulphamethoxy pyridazine, sulphadimethoxine, sulphafurazole, sulphisoxazole, sulphamethizole, succinyl sulphathiazole, phthalyl sulphathiazole, sulfapyridine, probenecid, Acetazolamide, methazolamide, chlorothiazide, Hydrochlorthiazide, Hydroflumethiazide, Bendrofluazide cyclopenthiazide, chlorthalidone, Frusenide, Dapsone, Sodium sulfoxone, solapsone, sodium fonateglucose injection.

11. a) Miscellaneous Heterocyclic Compounds: Trimethadione, Paramethadione, Isocarboxazid, Triamterene, Phenindamine tartrate, Lucanthone hydrochloride.

b) Amidino Derivatives: Pentamidine isothionats, Hydroxystilbamidine isothionate, Dibromopropamidinone isothionate. Guanethidine sulphate, proguanil hydrochloride, chloroproguanil hydrochloride, chlorhexidine hydrochloride.

12. a) Quaternary Ammonium Compounds: Choline theophyllinate, suxamethonium bromide and chloride, carbachol, Bethanechol chloride, propantheline bromide, Neostigmine bromide and methylsulphate, Edrophonium chloride, pyridostigmine bromide, Demecarium bromide, pentolinium tartrate, Gaelamine triethiodide, cetrimide, Benzalkonium chloride, cetylpyridinium chloride, Domiphen bromide, Dequalinium acetate, Dequalinium chloride.

b) Dyes & Related Compounds: Amaranth, Evans Blue, Brilliant Green, Crystal Violet, Phenolphthalein, sulphonaphthalein, Fluorescein sodium, phenol sulphonaphthalein, Indigocarmine, Proflavin hemisulphate, Aminacrine, Mepacrine hydrochloride, quinacrine hydrochloride.

PRACTICALS

1. Synthesis of some compounds of Medicinal importance like barbiturates, Hydantoins, sulpha drugs, benzocaine etc.
2. Synthesis of some dyes like methylorange, phenolphthalein etc.
3. Qualitative Analysis and Estimation of drugs in formulations involving non-aqueous, diazotization and redox titrations etc.
4. Test for impurities in drugs as per I. P.

REFERENCE

1. Medicinal Chemistry by Alfred Burger.
2. Organic Chemistry of Drug Synthesis by Ledincer.
3. Principles of Medicinal Chemistry by William Foye.
4. Textbook of medicinal pharmaceutical chemistry by Wilson and Gisvold.
5. Bentley and Driver's Pharmaceutical Chemistry.

PHARMACOLOGY AND TOXICOLOGY

THEORY

1. The mode of action of drugs in the body, the absorption distribution and fate with reference to how they may be modified.
2. The importance of suitable formulations of medicaments and how these may influence the rate of absorption and breakdown of the drug. Bio-availability and bioequivalence.
3. Concept of receptors, forces involved in drug receptors interaction drug receptor theories, principles of drug action, adverse drug reaction - structure activity relationship-principles of drug design.
4. The depressants of the central nervous system, which are in frequent use of which are of toxicological importance. General anaesthetics, hypnotic, anticonvulsants, antiemetics, antipyretics, anti-inflammatory, analgesics and ataraxics.
5. Local anaesthetics and particular reference to their general properties, modes of action and methods of use, together with a more detailed account of those in frequent use in Medicine.
6. The stimulants of the central nervous system which are in frequent use or which are of toxicological importance.
7. Drugs which influence the working of the automatic nervous system which are in frequent use or which are of physiological or toxicological importance. Drugs with muscarinic and nicotinic actions, drugs with actions at adrenergic nerve endings, ganglion blocking drugs, anticholinesterases and those various classes of substances which antagonise the actions of the drugs mentioned above.

8. Drugs which are of therapeutic importance which influence neuromuscular conduction in skeletal muscle.
9. The Pharmacology of those drugs with an action on the alimentary canal. The general principles of their action and uses with a more detailed account of those in frequent use. Drugs acting on respiratory tract.
10. The action of drugs on the heart.
11. The action of drugs on the peripheral circulation in so far as they are of therapeutic importance.
12. The effects of drugs on the eye in so far as these are of therapeutic or toxicological importance.
13. The physiological and pathological importance of histamine 5HT, prostaglandins Kinins, renin and angiotensin in the body. And the antagonistic effect or antihistaminic substances in general with particular reference to those more commonly used substances.
14. Diuretics and antidiuretics of therapeutic importance.
15. Endocrinology and account of the physiological functioning and disfunctioning of the important endocrine glands and a more detailed account of those hormones and synthetic hormone analogue which have a well defined use in therapeutics.
16. Chemotherapy of infectious diseases. The general principles of the chemotherapy of infections, together with a sample account the more generally successful modes of treatment of those infectious diseases which are of frequent occurrence in India.
17. Antineoplastic agents.

18. Toxicology: Types of poisoning, inhaled poison, household poison and agricultural poison.
19. Cumulative poisoning: Systematic and local treatment of poisoning and their treatment.
20. Indigenous plant poisons: Plumbago, Calotropis, cerbera, thevetia, nerium, datura.
21. Examination of toxic agents, principles of identification and estimation of poisons in biological materials.
22. The principles of biological assay with special reference to the assay of those substances which are used in therapeutics but, which are as yet not capable of being evaluated chemically.

N. B.: The officially listed drugs and their preparations in the B. P. & I. P. may be taken as guide.

23. Principles of clinical pharmacology and designs for testing of drugs in humans.

PRACTICALS

1. Experiments for studying the effect of the more important drugs like Histamine, Acetyl choline, 5 HT on suitable isolated tissue preparations and their effect in the presence of antagonist.
2. Biological assays of substances like Histamine, Acetyl Choline, 5 HT, d-Tubocurarine and insulin using suitable methods.
3. Experiments on CNS :
 - a) General behavioral studies.
 - b) Analgesic and anti-inflammatory activity

- c) Anti-convulsant activity
- d) Sedative & Hypnotic activity
- e) CNS Stimulant activity
4. Experiments on CVS :
 - a) Effects of various drug on isolated heart preparations of various animal models.
 - b) Drugs acting on blood vessels
5. Experiments on Gastro intestinal Tract :
 - a) Study of Oesophageal motility.

Toxicological Studies :

1. LD₅₀ determination and Acute toxicity studies.
2. Experiments on Toxicities of Drugs and their antidotes.
 - a) Organo phosphorous poisoning
 - b) Heavy metal poisoning
 - c) Barbiturate poisoning
 - d) Opioid Poisoning

Local Anaesthetics : Study of Local Anaesthetic Activity By

- a) Surface anaesthesia
- b) Infiltration Anaesthesia
- c) Nerve Block anaesthesia (Sollman Method)

General Pharmacology :

- a) Routes of Administration of Drugs.
- b) Enzyme induction activity.

DISPENSING, HOSPITAL AND CLINICAL PHARMACY

THEORY

PHARMACEUTICAL DISPENSING :

1. Definitions and general dispensing procedure, prescription and its parts.
2. Sources of information required to Pharmacists.
3. Sources of errors and care required in dispensing prescriptions.
4. Types of dispensing products.
5. Containers, closures and labelling for dispensed products.
6. Principles involved and procedures adapted in dispensing of typical preparations like mixtures, solutions, syrups, exixirs, suspensions, emulsions, creams, ointments, granules, capsules, pastes, jellies, suppositories, ophthalmic preparations, ear and nasal drops, pastilles, lozenges, pills, lotions, liniments, inhalations, paints, sprays, tablets, tablet triturates etc.
7. Incompatibilities - physical, chemical and therapeutic in - compatibilities. Drug - Drug and drug - food interactions. Methods of overcoming and handling of incompatible prescription.
8. Dispensing of proprietary medicines, Bioavailability concept and its significance in dispensing proprietaries.
9. Pharmaceutical Latin - Latin terms used in prescriptions and their English equivalents. posology and calculation of child dose.
10. Pharmaceutical calculations - weights and measures, calculations of doses, enlarging and reducing receipts, percentage solutions, alligation, alcohol dilutions, proof spirit, excise, duty, isotonic solutions, displacement value, calculation in powder.

HOSPITAL PHARMACY :

1. Hospital and its organisation, functions, Pharmaceutical therapeutics committee.
2. Pharmacy organisation and personnel administration, location and space, equipment. Maintenance of standards.
3. Hospital formulary.
4. Laws and regulations. Purchasing and inventory control. Storage of Drugs.
5. Pharmacy procedure manual
6. Drug Distribution.
7. Dispensing to in-patients.
8. Dispensing to out-patients
9. Dispensing of controlled drugs
10. Drug charges.
11. Prepacking
12. Manufacturing of drugs - bulk and sterile. **Central sterile** supply quality control in Hospital Pharmacy.
13. Drug information centre.
14. Annual report
15. Safe use of medicines
16. Professional practices
17. Current state of Hospital Pharmacy in India.

CLINICAL PHARMACY :

1. Clinical relevance of formulation of medicines.
2. Quality Assurance :
 - a) Evolution of quality assurance concepts in Hospital Practice.
 - b) Operation of a quality assurance system
 - c) Good manufacturing practice
 - d) Analytical quality control
 - e) Development in quality assurance.
3. Role of Pharmacokinetics in clinical pharmacy.
4. Metabolism and protein binding of drugs
5. Non-compliance : Introduction, definition, extent, importance, method of assessment compliance, reasons for non-compliance, strategies for improving compliance.
6. Clinical trials and drug substances
7. Monitoring for efficiency and toxicity
8. Adverse drug reactions

HOSPITAL PHARMACY INCLUDING DISPENSING & CLINICAL PHARMACY

PRACTICALS

Practical exercises based on the principles studied in theory in :

- a) Hospital Pharmacy
- b) Dispensing Pharmacy
- c) Clinical Pharmacy

CLINICAL & HOSPITAL PHARMACY PRACTICALS

- a) Simple Pharmacokinetic experiments on animals & Humans
- b) Preparation of drug profiles
- c) Analysis of prescription to detect drug interactions, overdose etc.
- d) Preparation of a report on topics related to drug use, toxicity etc.
- e) Test for drugs and their metabolites in urine.
- f) Drawing implications from case study

IV - B. PHARMACY

CHEMISTRY OF NATURAL PRODUCTS

THEORY

1. Structural elucidation of Natural products-General Methods.

2. Source, isolation, structure, chemistry, synthesis, uses, official preparation, methods of estimation, test for identity, other Pharmacopial standards of the following :

i. Alkaloids : Ephedrine, Nicotine, atropa, Cinchona, Coca, opium, Ipeca, Nux Vomica, Curare and Rauwolfia alkaloids.

ii. Purines : Constitution, synthesis of uric acid and caffeine inter relationship of caffeine, theobromine and theophylline and their medicinal importance.

iii. Vitamins : Classification of vitamins, skeleton structure of vitamins, official in Indian Pharmacopoeia, their constitution and synthesis, carotenoids, source, structure and conversion to Vit. A.

iv. Carbohydrates : General chemistry of carbohydrates. Structure of glucose. Determination of configuration, ring structure for glucose, study of the chemical nature of fructose, sucrose, lactose, maltose and starch, cellulose and their derivatives.

v. Proteins, Classification, general characteristics of proteins, Amino acids and essential Amino acids, synthesis of individual amino acids. Degradation of proteins, study of the test for purity and medicinal uses of following compounds of the pharmacopoeia, Gelatin, Gelatin sponge, zinc gelatin and silver protein.

vi. Steroids : Nomenclature, tests for steroids, skeleton structure of cholesterol, Ergosterol, stigmasterol, Bile acids, androgens.

Estrogens : Inter-relationship of estrone, esternal and estradiol, constitution of estrone, preparation and Medicinal uses of synthetic non-steroid estrogenic compounds. Benzestrol, Hexestrol, Dienostrol, Stilbostrol.

Progesterone : Skeleton structure, synthesis of progesterone from naturally occurring sapogenin's structure and activity relationship, skeleton structure of important progesterone derivatives used as oral contraceptives.

Adrenal cortex hormones : Classification, Skeleton structure of cortisone, corticosterone, hydrocortisone. Synthesis of cortisone from naturally occurring sapogenins. Skeleton structure of important synthetic corticosteroid analogues such as alpha fluoro compounds.

vii. Glycosides : Chemistry of amygdalin and salicin. A general study of cardiac glycosides of digitalis, strophanthus and squill, Anthraquinone glycosides and saponins.

viii. Antibiotics : Skeletal structure of penicillin, Degradation of penicillin, skeleton structure of Depot penicillin and newer synthetic penicillins, streptomycin, chloramphenicol and tetracyclins. Synthesis of chloromphenicol, anti-cancer and anti-fungal antibiotics.

ix. Terpenes : Classification and pharmacopoeial examples. Geraniol and its constitution. Synthesis of linalol, inter relationship of limonene, dipentene,

alpha terpeniol, terpin hydrate, cineole and carvone. Constitution of Menthol and thymol. Synthesis of camphor. General chemical composition of fixed oils, fats and waxes. A general study of the methods of analysis of fats, oils and waxes of Pharmacopoeia of India, test for adulteration.

PRACTICALS

1. Test for purity of some official compounds belonging to the class of Natural Products.
2. Qualitative analysis and estimation of pure natural products and finished preparations.
3. Analysis of Fats, Oils and waxes.
4. Analysis of Proteins and carbohydrates.

REFERENCES

3. Alkaloids by Manske.
4. Hormone Chemistry by Butt.
5. Steroids by Fischer & Fischer.
6. Pharmacognosy by Trease and Evans.
7. Organic constituents of higher plants by Robinson.

PHARMACEUTICAL BIOTECHNOLOGY

THEORY

1. A study of bacteria, yeasts, moulds including their morphology, habit variation, reproduction, nutrition, cultivation, isolation and identification.
2. Preparation of culture media.
3. Microbial Growth: Bacterial mass, total count, counting chamber, stained film, viable count, Microbial growth measurement techniques, dry weight, wet weight, turbidity, multiplication and death, batch culture, continuous culture, synchronous culture, cell differentiation sporulation, dormancy.
4. Stains and staining techniques.
5. Sterilisation and tests for sterility.
6. Biosafety methods & good laboratory Practice: Techniques in the use of pipette and pipetting aids, techniques to avoid dispersal of infectious material, techniques to use biological safety cabinet, techniques to avoid ingestion of infectious material, techniques to avoid injection of infectious material, techniques for separating serum, techniques for the use of centrifuges, homogenisers and shakers.
7. Immunology: Immunity - types of immunity, immunisation and immunisation methods. Manufacture and standardisation of vaccines of bacterial viral and rickettsial origin.
 - a) Production of vaccines, sera and immunoglobulins of bacterial origin. Maintenance of seed strains, production and purification methods of tetanus and diphtheria toxoids

production of pertussis vaccine, production of typhoid and cholera vaccines, production of BCG vaccine, production of sera and immunoglobulins for diagnostic, therapeutic and protective purposes, advances in making better bacterial vaccines.

b) Production of vaccines, sera and immunoglobulins of viral origin: Production of oral polio and killed polio vaccines, production of rabies vaccine, production of Japanese Encephalitis, yellow fever, hepatitis-B and MMR group of vaccines, vaccines against respiratory viruses, advances in making newer viral vaccines.

c) Blending and containerisation of vaccines: Techniques of blending and equipment design, adjuvants and their use, preparation of certain important adjuvants such as aluminium phosphate and aluminium hydroxide, containerisation principles and techniques.

d) Principles, criteria and standardisation methods of quality control of vaccines, sera and immunoglobulins: Sterility test, identity test, hydrogenation concentration, biochemical tests, visual assessment, immunity test, potency test, stability test and raw material testing, preparation and use of laboratory animals for in vivo testing.

8. Injections of Biological Origin :

- | | |
|--|--------------------------|
| a) Injection of ACTH | b) Injection of Heparin |
| c) Injection of insulin & its products | |
| d) Oxytocin injection | e) Vasopressin injection |
| f) Injection of penicillin | g) Injection of procaine |

9. Blood products & Plasma substitutes : Collection, processing and storage of whole human blood, concentrated human R.B.C., dried human plasma, human plasma protein fraction,

FORENSIC PHARMACY

THEORY

1. Definition and scope of Forensic Pharmacy. Pharmacist's role in drug treatment and drug usage. Pharmacist as a member of health care team.
2. Pharmaceutical legislations in India. Historical development of Pharmaceutical education in India and its present status. Professional ethics in Pharmacy practice, legal and ethical responsibilities of pharmacists.
3. A detailed study and the understanding of the various acts and rules (as last amended) governing the Pharmaceutical profession in India.
 - a) Pharmacy Act.
 - b) Drugs and Cosmetics Act 1940 and Rules 1945.
 - c) Narcotics and Psychotropic substances Act.
 - d) Drugs and Magic remedies (Objectionable advertisements) Act 1955.
 - e) Poisons Act and Rules.
 - f) New Drug Policy 1986.
 - g) Medicinal & Toilet preparations (Excise Duties) Act & Rules.
 - h) Shops and Establishment Act.
 - i) Essential Commodities Act.
 - j) Drugs (Price Control) Order.
 - k) Medical Termination of Pregnancy Act.

- l) Prevention of cruelty to animal Act.
- m) Insecticide Act.
- n) Sales promotion employees (Condition of Service) Act.

dried human serum human fibrinogen, human thrombins, human normal immanoglobulin, human fibrin foam, control of blood products as per I. P., plasma substitutes - ideal requirements, dextran, PVP.

10. Sutures and Ligatures : Types, preparation, standards and evaluation.
11. General Principles of Microbiological Assays : With reference to vitamins and antibiotics : Preparation of primary, standard and their units, preparation of inoculum, pharmacopoeial methods of biological assay.
12. Disinfectants Bactericides and Bacteriostatics : Factors influencing disinfection, dynamics of disinfection, classification with examples, evaluation of disinfectants.
13. Fermentation Technology : Principles of fermentation, types of process, surface culture, protected culture, solid state fermentation, microbial transformation, their limitations and advantages. preparation of alcohol, citric acid, lactic acid, penicillin, streptomycin, riboflavin, diastase and C cystine monohydrachloride.
14. Advances in Biotechnology : A broad study of techniques of genetic engineering and its applications in Pharmaceutical biotechnology. Viz. No. Recombinant DNA techniques, monoclonal antibodies. Insulin production by micro-organisms and genetic engineering.

PRACTICALS

1. Animalcules observation study from various Natural sources.
2. Preparation of various culture medias and sterilization procedures.
3. Preparation of some specific media for particular identification of some organisms and for biochemical reactions.

4. Practising various inoculation methods over liquid and solid culture medias.

5. Carrying out various biochemical tests related to identification of various group of organisms (particularly Bacteria)

6. Study on motility of bacteria by various methods.

7. Comparison of sensitivity of antibiotics over different groups of Micro-organisms.

8. Isolation of soil microbes by successive plating techniques of finding its antibiotic property over other organisms.

9. MICROBIAL Assay methods.

10. Standardization of some biological products.

11. Study on fundamentals of bio reactors on lab scale.

12. Preparation of some products by using laboratory fermentors.

FORMULATIVE & INDUSTRIAL PHARMACY

I. PERFORMULATION STUDIES :

1. Dosage form Necessities : Antioxidants, preservatives, colouring, flavouring and diluting agents, solvents and others.
2. Formulation : Importance, physical properties, physical form, particle size, crystal form. Bulk control, solubility wetting, flow cohesiveness, compressibility, organoleptic properties, chemical properties, hydrolysis, oxidation, recemization, polymerisation, isomerisation decarboxylation, enzymic decomposition, formulation additives, stabilizers, suspending and dispersing agents, dyes solid excipients etc.

II. STABILITY TESTING :

1. Stability of formulated products : Requirements, products stability, shelf life, overage, containers, closures.
2. Kinetic Principles of stability testing : Reaction rate and, order, acid base catalysis, decomposition reactions, stabilization and stability testing.

III. CAPSULE TECHNOLOGY :

Advantages of capsules. Hard gelatin capsules, shell formulation and manufacturing, size, storage, printing, filling, cleaning, binding, general formulation of contents, evaluation. Soft gelatin capsules, shell formulation, content formulation and filling. Micro capsules-advantages, coating materials, methods of manufacture of Microcapsules I F., and other important formulations.

IV. TABLET TECHNOLOGY :

Types, ideal requirements, granulation methods, general formulation, difficulties in preparation and evaluation. Sugar coating, compression coating, film coating and enteric coating IP formulations.

V. PARENTERALS : (Products requiring sterile packaging)

Definition, types, advantages and limitations, general formulation, vehicles, containers, production procedure, production facilities, controls, tests, selected IP injections, sterile powders, implants, emulsions, suspensions.

VI. PHARMACEUTICAL AEROSOLS :

Definition, types, propellants, general formulation, manufacturing, aerosol containers and packaging methods, pharmaceutical applications.

VII. OPHTHALMIC PREPARATION :

Eye ointments and eye drops, requirements, formulation methods of preparation, containers, evaluation, IP and other important products.

VIII. COSMETIC FORMULATION :

Formulation and preparation of dentifrices, hair creams, 'lipsticks, face powders, baby and bath powders, shaving preparations, skin cream, shampoo, hair' dyes, depilatories, manicure preparations.

IX. PROLONGED ACTION PHARMACEUTICALS :

Benefits, limitations, oral products, terminology, drug elimination rate, types and construction of products, evaluation, parenteral products absorption and evaluation.

X. NOVEL DRUG DELIVERY SYSTEMS :

Transdermal delivery systems, osmotic drug delivery systems, Liposomes.

XI. BIOPHARMACEUTICS & PHARMACOKINETICS :

1. Biopharmaceutics : Rate of drug absorption after administration, drug concentration in blood, biological factor in drug absorption, physico-chemical factors, dosage from consideration for gastrointestinal absorption, drug distribution, site seeking, drug elimination.
2. Pharmacokinetics : Compartment models, A brief study of parameters like biological half life, apparent volume of distribution renal clearance, total body clearance, absorption and elimination rate constants, significance of the data.
3. Bioavailability and bioequivalency testing : Definitions, dosage form dissolution rate, bioequivalence testing.

PRACTICALS

Experiments devised to study the formulation of dosage forms, stability testing of formulated dosage forms, evaluation of dosage forms, evaluation of dosage form necessities (additives) in the stable formulation of dosage forms, preparation and evaluation of prolonged action dosage forms, bioavailability testing and other to illustrate topics mentioned in theory.

REFERENCES

6. Theory and Practice of Industrial Pharmacy by Lachman.
7. Hard Capsules by Ridgway. K. Pharmaceutical Press, London.

ADVANCED PHARMACOGNOSY

THEORY

1. Study of various systems of classification of drugs from biological origin including chemotaxonomy and serotexonomy.
2. a) Introduction to plant physiology and plant biochemistry with special references to basic metabolic pathways.
b) Biosynthesis of medicinal significance like tropane alkaloids and steroidal glycosides.
3. c) Study of the utilisation of radio active isotopes investigation of biogenetic studies.
4. d) Study of plant growth regulators and their role in the production of secondary metabolites.

3. Study of modern methods of extraction, application of latest techniques like chromatography and electrophoresis in the isolation, purification and identification of phytoconstituents of crude drugs:

4. Study of industrial production and utilisation of phytoconstituents like citric acid, menthol, quinine, vinca alkaloids, senna glycosides, cardiac glycosides.

5. Study of sources, characters (Macroscopy and Microscopy) constituent and preparation for pharmaceutical uses of the following important materials:

- a) Essential oils: Oils from umbelliferous Fruits.
- b) Marine Natural Products: Alginate, Agar, Shark & Cod liver Oils.
- c) Surgical dressings: Absorbent Cotton, Absorbent lint, Viscose rayon, absorbent wool, Gelatin sponge, oxidized cellulose, alginate dressings, surgical catguts, ligatures.

- d) Pharmaceutical enzymes: Pectinase, papain and pepsin.
6. A study of the plant tissue culture and its application in Pharmacognosy with special importance to the production of secondary metabolites.
7. Study of Fermentation Technology and its application in the production of Antibiotics, vitamins etc.
8. Export potential of medicinal plants and their derivatives from India.
9. Principles involved in the preparation & standardization of Ayurvedic formulations such as Asawas, Aristas, Avaleha, Churna.

10. Quality control of crude drugs:

- a) Proximate analysis including Ash & extractive values, crude fibre content, UV & Fluorescence analysis of drugs in powdered form.
- b) Quantative microscopy & chemical microscopy-including microchemical analysis.
- c) Detection of common adulterants & insects in whole & powdered drugs.

PRACTICALS

1. Identification of crude drugs mentioned in (5) by means of sensory, macroscopical and microscopical characters and by chemical tests.
2. Experiments using T.L.C. column and paper chromatography as applied to certain alkaloids, glycosides, amino acids, containing drugs.

3. Exercise involving isolation of active principles :

- | | | |
|----------------|---|--------------------|
| a) Caffeine | — | from tea dust |
| b) Quinine | — | from cinchona bark |
| c) Citric acid | — | from lemon |
| d) Casein | — | from milk |
| e) Resin | — | from jalap |
| f) Starch | — | from potato |

4 Quantitative estimation of industrially & therapeutically important phyto constituents.

- Anthracene derivative in senna.
- Tropane alkaloids of Datura species.
- Eugenol content of clove.

5. Demonstration of experiment involving.

- Plant tissue culture.
- Growth regulators.

6. Experiments involving standardisation of certain Ayurvedic formulations.

7. Monograph exercise as per I.P.

- Castor oil.
- Shark liver oil.
- Oil of Turpentine.
- Oil of Eucalyptus.
- Honey.

MODERN METHODS OF PHARMACEUTICAL ANALYSIS

THEORY

Sources of errors in analysis, uses of significant figures and correct uses.

1. Study of the separations and determinations involving the following techniques and their applications in Pharmacy.

a) CHROMATOGRAPHY :

Column Chromatography : Adsorption and partition. Theory, preparation, procedure, methods of detection.

Thin Layer Chromatography : Theoretical consideration, preparation, procedure, detection of compounds.

Paper Chromatography : Theory of partition, different techniques employed, Filter papers used, Quantitative and qualitative detection.

Gas Chromatography : Introduction, Fundamental, column operation, detection.

Ion Exchange : Types of exchanges, Mechanism of Ion exchange, column operation.

- b) Counter current extraction, ultra centrifuge, high pressure liquid chromatography and get filtration.

2. A study of the following as described therein :

U.V. and Visible spectrophotometry : Principles, Beer Lambert's Law, classification of methods, study of the working principles of a one cell colourimeter and two cell colourimeter. Applications in Pharmacy, Theory of U.V. spectrophotometry, important study of the working principles of instruments used for analysis, applications in pharmacy.

3. Fluorimetry : Introduction, Theory, Fluorescence and chemical structure, factors affecting the intensity of fluorescence. Study of working principles of the instrument used for fluorescence analysis. Applications in Pharmaceutical Analysis.
4. TURBIDIMETRY AND NEPHLOMETRY : Theory of light scattering, Nephelometry, Turbidimetry for practical Analysis of dispersions, study of the working principles of instrument used for analysis. Application in pharmacy.
5. Potentiometric Titrations : Introduction, Electrochemical cells and Half cells, Electrodes, Measurements of Potential, application in Pharmaceutical Analysis.
6. Conductometric Titrations : Basic concepts, different types of conductometric titrations, apparatus used. Applications in Pharmaceutical analysis.
7. Polarography : Basic concept, Theoretical considerations, Basic instrumentation, Apparatus and principles, general polarographic analysis, applications in Pharmaceutical analysis.
8. Amperometric titrations with one polarized electrode, general procedure, titration curves, applications.
9. Assay procedure of advanced types from the Pharmacopoeia of India with special reference to the procedure and techniques involving the following :

Non-aqueous titration, oxidation-reduction, reaction involving the use of titanous chloride, ceric ammonium sulphate, diazotization methods complexometric methods.
10. A preliminary introductory study of the following topics in an elementary manner.

- a) Mass spectroscopy
- b) N M R
- c) E S R
- d) Infra Red spectroscopy.

PRACTICALS

1. Volumetric including newer methods of non-aqueous, complexometric titrations redox and diazotisation.
2. Limit tests for Halides, sulphates using Nephelo-turbidity
3. Determination of Physical constants used as criteria of purity like melting and boiling points, weight per ml., refractive index and viscosity.
4. Preparation of Buffer solutions and determination of pH using indicators and pH meter.
5. Quantitative analysis of compounds which absorb radiation in visible and uv region and determination of extinction coefficient.
6. Applications of the instruments studied in theory with special reference to official procedures of colorimeter, spectrophotometer, refractometer, Polarimeter, flamephotometer, pH meter and flourimeter,
7. Conductometric, potentiometric, polarographic, amperometric titrations and deadstop end point technique.
8. Chromatographic techniques and ion-exchange resins in separation and estimation.
9. Experiments on Electrophoresis
